

# Lady Elliot Island, Australia

September 2016

The very popular Lady Elliot Island 5 day seminar was a StuVac standout. Brilliant teaching, outstanding group, friendly and efficient island staff, beautiful surrounds and a seminar room with a difference!

The island is accessed by a 25 minute flight from Bundaberg airport and is located at the southern tip of the Great Barrier Reef. It is known for its spectacular marine life giving us plenty of activity in our down time. We snorkelled with manta rays and came close enough to turtles in the lagoon to provide them back scratches as they swam against snorkellers.

Diane Lee, assisted by Dr Holly Herman, presented “Introduction to the Integrated Systems Model for lumbopelvic & groin pain with a focus on sport-related injuries”.
